

Application

Basic Press Automation

Products Used2500, 1980R

Problem

A customer wanted to provide a basic level of press automation at a nominal cost.

Solution

A Gemco 2500 Programmable Limit Switch combined with a heavy-duty Gemco resolver or a 1980R Rotating Cam Limit Switch. Features include a compact design with 8 on-board relays (expandable to 64 on-board relays with expansion boards), programmable brake monitor, motion detect relay, die protection, speed compensation, multi-program and time based outputs, program security input, mechanical and solid state relays that are field interchangeable, and fault check diagnostics. Other standard and special resolvers are available.

Benefits

- Automates a stamping press at a fraction of the cost of a full press control package
- Windows programming software for easy set up
- Rugged resolver extends product lifespan

Conclusion

Gemco offers a full line of products to help automate the stamping press. Call 800.635.0289 to discuss your application or request a copy of our Stamping Brochure Z41.
